

POORNESH GOWDA G Y

Bengaluru, India

☎ +91 7019298140 — ✉ poorneshgowda@gmail.com — 🌐 Poornesh Gowda — 🐙 PoorneshGowda21

Summary

Information Science Engineering student with strong foundations in cloud computing, DevOps, and full-stack development. Demonstrated expertise in AWS, Docker, Kubernetes, and CI/CD pipelines, with practical experience designing, building, and deploying end-to-end systems across cloud and local infrastructure. Passionate about designing scalable, reliable systems and solving real-world engineering challenges through data-driven thinking and clean architecture.

Education

Bachelor of Engineering in Information Science and Engineering	2023 – 2027
<i>Nitte Meenakshi Institute of Technology, Bengaluru</i>	<i>CGPA: 9.07/10</i>
Pre University Course (PUC)	2022 – 2023
<i>Master Pre University College, Hassan</i>	<i>Percentage: 93.15%</i>
Secondary School Leaving Certificate (SSLC)	2020 – 2021
<i>Vijaya School, Hassan</i>	<i>Percentage: 83.04%</i>

Projects

Crop Yield Prediction & Cloud Benchmarking <i>Python, Random Forest, XGBoost, Docker, EC2</i>	Ongoing
- Developed a dynamic crop yield prediction system with user-configurable input parameters, leveraging Random Forest and XGBoost models to deliver prediction accuracies of 88% and 89% across diverse crop datasets. - Deployed the application on AWS Elastic Beanstalk with Docker containerization, enabling scalable cloud configurations to efficiently support concurrent prediction requests. - Benchmarked model performance across various cloud instance sizes, identifying a configuration that reduced inference costs by 90% while consistently maintaining inference latency below 5 seconds.	
VProfile GitOps Deployment <i>AWS, Kubernetes, Terraform, ArgoCD, Jenkins</i>	2026
- Provisioned AWS infrastructure using Terraform. Deployed a Java application on Amazon EKS with Docker, Kubernetes, and Helm, reducing manual environment setup time by 90%. - Implemented a GitOps workflow with ArgoCD, enabling automated deployments and continuous synchronization from GitHub with an average sync time of 2 minutes. - Built a CI/CD pipeline leveraging Jenkins, Maven, SonarQube, and Nexus, resulting in an 80% reduction in build-to-deploy time and automating code quality checks across all modules.	
MarketPulse <i>React.js, Node.js, MongoDB, REST APIs, Express.js, Docker, JWT</i>	2026
- Developed a full-stack stock market analytics platform using the MERN stack, implementing secure JWT authentication and CRUD operations for portfolio management, watchlists, and user profiles. - Designed and developed RESTful API endpoints to integrate live stock market data, company news, historical price charts, and interactive dashboards, enabling real-time financial insights. - Built responsive frontend modules with role-based access control, portfolio analytics, transaction history, and data visualization to deliver an interactive investment tracking experience.	

Technical Skills

Languages: Java, Python, SQL
Databases & APIs: MongoDB, MySQL, REST APIs
Backend & Cloud: AWS (EC2, S3, IAM), Node.js, Express.js
DevOps & Tools: Git, Docker, Jenkins, Kubernetes, Terraform, Ansible, CI/CD Pipelines
Platforms & Web: Linux, Windows, HTML, CSS, React.js
Core Subjects: Object-Oriented Programming, DSA, DBMS (SQL), Computer Networks, Operating Systems
Soft Skills: Problem Solving, Team Collaboration, Continuous Learner, Adaptability, Curiosity

Certifications

AWS Cloud Foundations – AWS Academy
Decoding DevOps – From Basics to Advanced Projects with AI – Udemy
Full Stack Web Development (MERN Stack) – Udemy

Achievements

Bronze Medal, National Level Netball Championship, 2025
Finalist, Odoo Hackathon, 2025
